DETAILED ACTION

Allowable Subject Matter

Claims 1 and 3-7 are allowed. The following is a statement of reasons for the indication of allowable subject matter: as to claims 1 and 7, the prior art made of record teaches a terminal in a CDMA system that performs inter frequency handover measurements in compressed mode where a terminal with a layered protocol stack, the transmission of user data on a speech or data connection can be suspended for the measurement time by delaying data packets on a higher layer of the protocol stack (reference Palenius et al. (US 2002/0019231, paragraph 0022 or Virtanen (US 7,020,108)) but does not teach a quality identifying unit configured to determine whether the identified quality accepts delay variation and if the identified quality does not accept delay variation, the transmission rate control unit is configured to reduce the transmission rate of the higher layer which is higher than a physical layer having a physical layer transmission rate.

Conclusion

Additional prior art made of record but not relied on but considered to clearly teach the current state of the art for inter-frequency handover includes Palenius et al. (US 2002/0019231).
